Two kinds of work, one habit

I build the systems behind a business and the automations that keep them running. At The MSP Marketing I build GoHighLevel automations and AI chat for MSP clients. At BUGEMCO I design, build and maintain the cooperative's internal systems. In both, I test before going live and add error alerts so problems surface before they reach people.

A

GoHighLevel & Automation

The MSP Marketing · Automation Specialist

1. MSPOS AI: Front Desk AI + Pulse
2. GHL builds, integrations & error-catching

B

Systems Built for BUGEMCO

BUGEMCO · IT Supervisor – Software Dev & InfoSec

1. All 10 systems at a glance
2. System profiles, two per page

// HOW I WORK

01 Ask first

When a request is unclear, I pause and ask, and I come with a recommended setup based on the business's structure and SOPs.

02 Test before live

Every workflow and system is tested with test contacts or test data before it touches real customers.

03 Catch errors early

I build error-catching steps into automations so a broken process alerts me before it reaches the client.

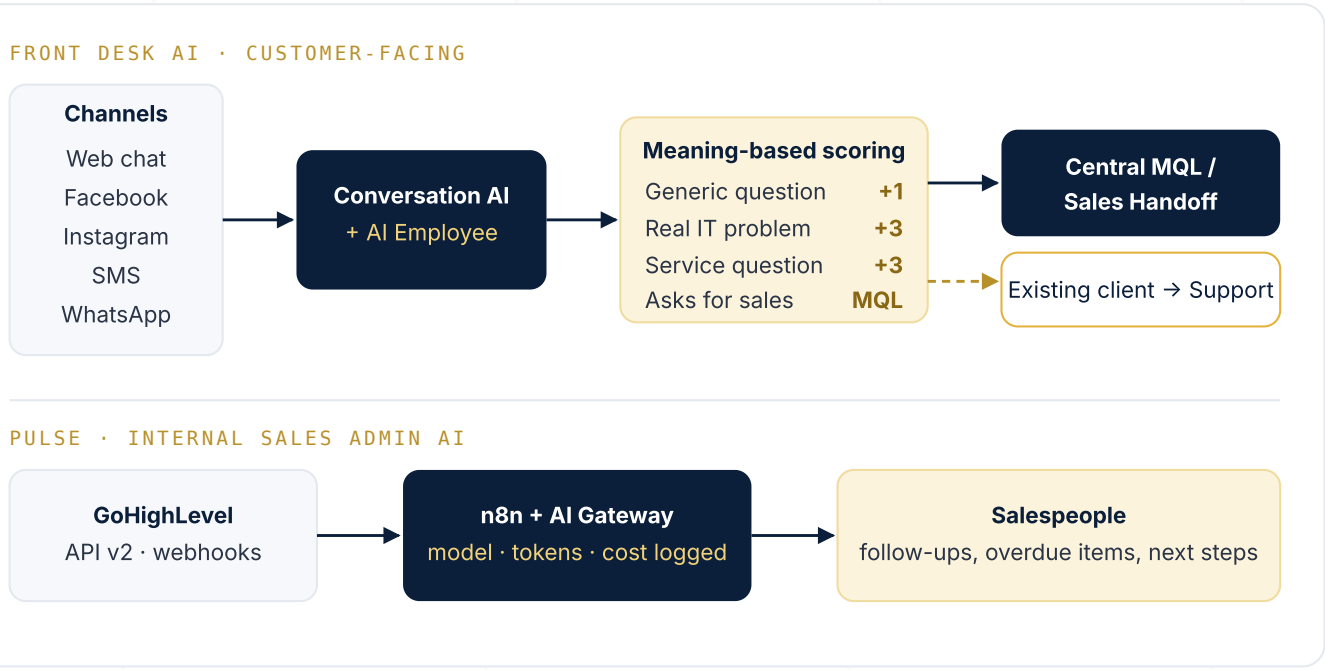

// TOOLKIT

GoHighLevel · n8n · Zapier · Power Automate · ConnectWise · ClickUp · Monday.com · React · TypeScript · Next.js · Node.js / Express · PHP · MySQL · Tailwind · REST API · GitHub · ChatGPT · Claude

A1 · THE MSP MARKETING

MSPOS AI: Front Desk AI + Pulse

An AI product for managed IT service providers (MSPs), built on GoHighLevel. Front Desk AI answers prospects on five channels and hands real leads to sales. Pulse is an internal AI assistant that keeps salespeople on top of their pipeline.

How a chat becomes a sales lead, and how Pulse supports the sales team. Real leads go through one central handoff; existing clients are routed to support and never become prospects.

// WHAT I BUILT AND CONFIGURED

01 AI chat on 5 channels

- Conversation AI and AI Employee set up for web chat, Facebook, Instagram, SMS and WhatsApp
- Website chat widget embedded and opened from the site's own buttons

02 Lead scoring & handoff

- Scores each chat by meaning, not keywords
- Clear requests (quote, call, assessment) go straight to the one central MQL / Sales Handoff, never a parallel one

03 One build for every client

- One master snapshot; each client's details live in custom values
- Approved tags only, with AI state kept in custom fields

04 Safe, measurable AI

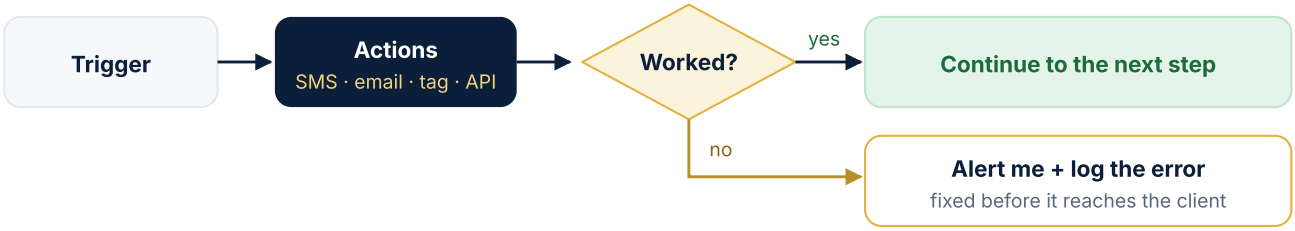

- Deadlines, SLAs and stage gates run on workflows, not the AI
- Every AI call logs the client, model, tokens and estimated cost

A2 · THE MSP MARKETING

GHL builds, integrations & QA

My day-to-day work: building GoHighLevel automations for MSP clients, connecting them to other tools, and making sure they keep working after launch.

01 ERROR-CATCHING PATTERN I ADD TO AUTOMATIONS

02 WHAT I BUILD

Workflows

- Lead follow-up, nurture and reminder sequences
- Clear naming: `Area | Purpose | Variant`
- Tested with test contacts before going live

CRM setup

- Pipelines, forms, funnels and custom fields
- Tag rules so data stays clean
- Snapshots and custom values to roll out to many clients

AI chat

- Conversation AI bots, modes and handover actions
- Training from site content and FAQs
- Chat widget embedded on client websites

03 INTEGRATIONS

Automation platforms

n8n, Zapier and Power Automate connect GoHighLevel with other apps. n8n handles the heavier jobs, like the AI gateway behind Pulse.

n8n · Zapier · Power Automate · ConnectWise

API & webhooks

- GoHighLevel API v2 with private integration tokens
- Webhooks verified by signature, and handled once even when GHL retries
- Stays within API rate limits

04 HOW I KEEP WORK ON TRACK

Prioritise by impact

Broken lead capture first, deadlines next, small updates last.

Track everything

Client requests tracked in ClickUp and Monday.com so nothing is missed.

Document decisions

Progress and decisions logged, so the team always knows what changed and why.

B1 · BUGEMCO

10 systems for one cooperative

As IT Supervisor for Software Development and Information Security at BUGEMCO (Bukidnon Government Multi-Purpose Cooperative), I lead the ICT systems that run membership, messaging, events, insurance, retail, school, records, credit and finance.

4
live and in daily use

2
deployed, preparing to go live

4
in testing or development

SYSTEM	PROGRESS	STAGE
MIS BUGEMCONNECT Membership Information System	100%	Live & in daily use
SMS Blast Facility Text messaging to members, at scale	100%	Live, used by other departments
Queuing System Branch queue management	100%	Deployed, in daily use
Event System Ownership Meeting: attendance, claims, raffle	100%	In use at the Ownership Meeting
CAC-IIS Insurance System Coop Assurance Center: Insurance Information System	90%	Deployed, not yet in use
BUGEMCO Mart Online Online store with credit line	90%	Deployed, no users yet
BLC School System BUGEMCO Learning Center school management system	75%	Presented, in data testing
RMS Records System Record Management System	75%	First presentation held
CreditMS Credit System Credit Management System	60%	Built, awaiting first presentation
FMS Finance System Finance Management System	10%	Starting, first module handed over

Progress scale: 10% planning · 40% building · 60% built · 75% presented · 90% deployed · 100% live and in use.

MIS BUGEMCONNECT

Membership Information System

`members.onlineportal.bugemco.com`

100%

Live & in daily use

WHAT IT IS

The cooperative's membership system. It holds every member's record and runs membership steps online, from the Pre-Membership Education Seminar (PMES) to member sign-in.

WHY IT MATTERS

One record per member, and manual steps automated: applicants get their PMES schedule by text, and members confirm sign-ins with a one-time PIN.

1. Applicant books a PMES and gets the schedule by text
2. Member signs in and confirms with a one-time PIN
3. Staff keep member records complete and current

STATUS Live and in daily use; reports improved and bugs fixed as found.

NEXT Keep completing member records.

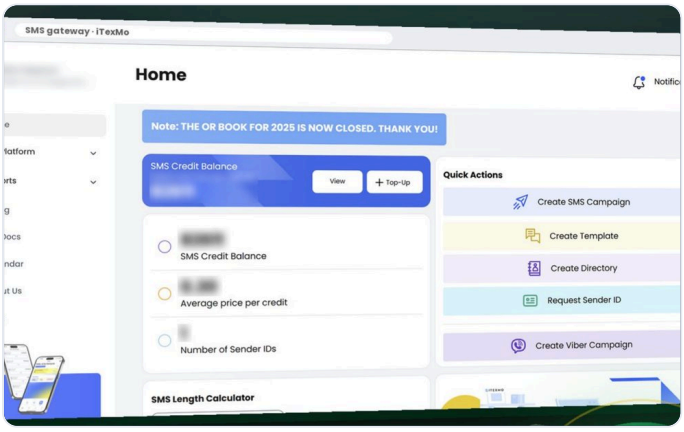

SMS Blast Facility

Text messaging to members, at scale

`SMS gateway · iTexMo`

100%

Live, used by other departments

WHAT IT IS

Sends text messages to many members at once through an SMS gateway. MIS sends its automatic texts through it, and departments run their own campaigns.

WHY IT MATTERS

Reach members quickly and cheaply (promotions, payment reminders, one-time PINs, PMES notices) without staff texting one by one.

1. Marketing sends a promotion to members
2. Payment reminders go to past-due accounts
3. MIS sends PINs and PMES notices automatically

STATUS Live with no problems; other departments now run their own campaigns.

NEXT Connect more of the coop's systems to it.

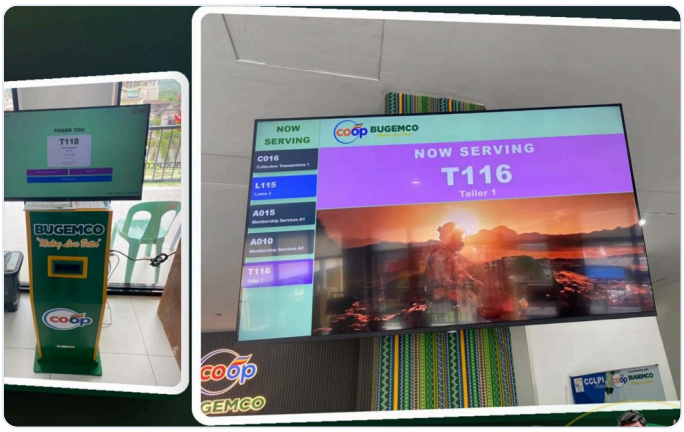

Queuing System

Branch queue management

Vendor-supplied (SCL Dura) · deployed by ICT

100%

Deployed, in daily use

WHAT IT IS

Manages the line of members at the branch. A kiosk prints a numbered ticket, a Now Serving board calls it, and the teller calls the next number.

WHY IT MATTERS

Members wait seated and are called in order, and every ticket is timed so waiting times can be managed.

1. Member takes a ticket at the kiosk
2. The board calls the number to a counter
3. Management reviews waiting times in reports

STATUS Running stable in the branches. Bought, not built in-house. **NEXT** Upload the marketing video, with Marketing.

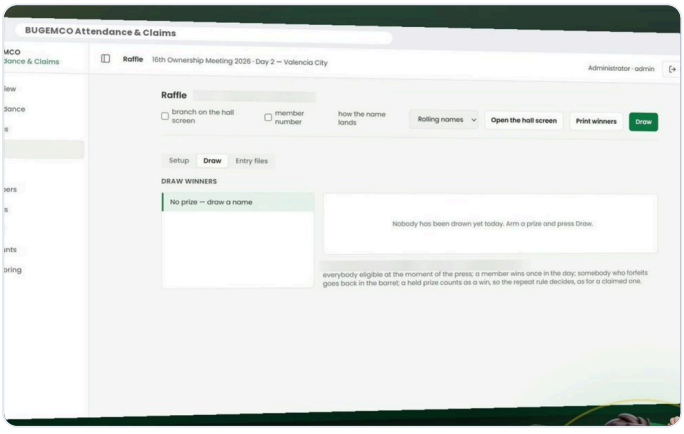

Event System

Ownership Meeting: attendance, claims, raffle

BUGEMCO Attendance & Claims

100%

In use at the Ownership Meeting

WHAT IT IS

Runs the Ownership Meeting from one system: attendance, claims (cash released to members) and the raffle draw, which is entirely new this year.

WHY IT MATTERS

Auditing and tracing. Every ticket, cash release and cash return is recorded with who did it and when, to stop cash discrepancies.

1. Member is checked in and given a ticket
2. Claims staff release cash, recorded per drawer
3. Raffle entries are drawn on the hall screen

STATUS Ready and in use for attendance, claims and the raffle draw. **NEXT** Review how the system served the meeting.

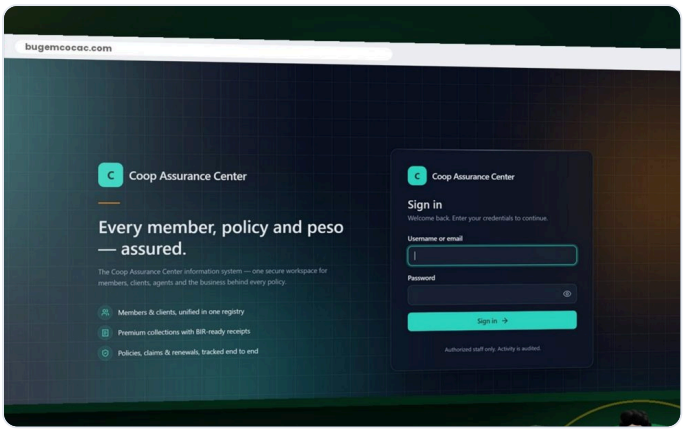

CAC-IIS Insurance System

Coop Assurance Center: Insurance Information System

bugemcocac.com

90%

Deployed, not yet in use

WHAT IT IS

One workspace for the Coop Assurance Center's members, clients and agents, and the policies, premiums, claims and remittances behind them.

WHY IT MATTERS

Track every policy, premium and claim from start to finish, with BIR-ready receipts for premium collections.

1. Staff register the client and the policy
2. Premiums collected with a BIR-ready receipt
3. Claims and renewals followed to the end

STATUS Deployed; first presentation held. API integration with CLIMBS in planning.

NEXT Second presentation, then go-live.

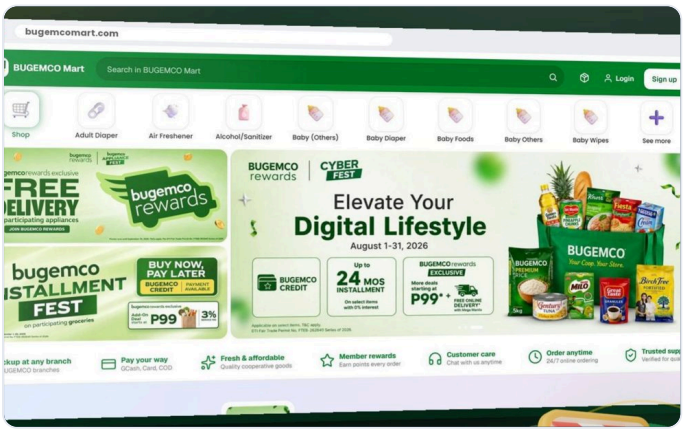

BUGEMCO Mart Online

Online store with credit line

bugemcomart.com

90%

Deployed, no users yet

WHAT IT IS

Lets members buy from BUGEMCO Mart online, including buying against their credit line instead of paying cash.

WHY IT MATTERS

Members order any time and pick up at a branch. The credit line process is approved by Accounting and Credit.

1. Member browses and orders online
2. Pays by GCash, card, COD or credit line
3. Picks up the order at a branch

STATUS Deployed; presentations held and credit line process approved.

NEXT Train users for a simulation run and load product data.

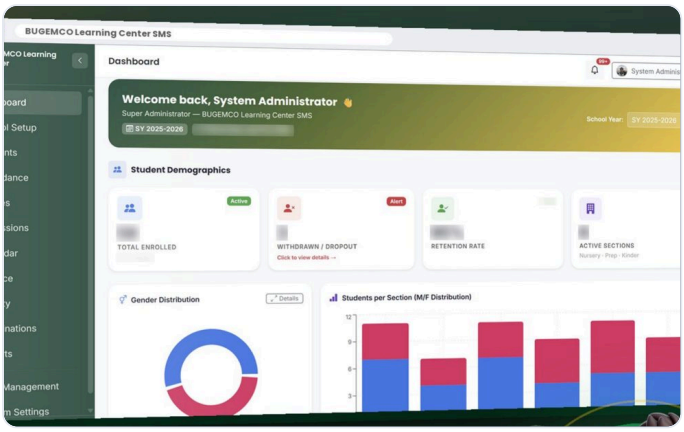

BLC School System

BUGEMCO Learning Center school management system

React · TypeScript · Next.js · Express · MySQL

75%

Presented, in data testing

WHAT IT IS

Runs the school: enrollment, student records, grading, report cards, billing and a parent portal, with 6 user roles from Super Admin to Parent.

WHY IT MATTERS

Grades, records and balances always current in one system, and visible to parents in the Parent Portal.

1. Registrar enrolls the student
2. Teachers enter grades; report cards produced
3. Parents follow grades and balances

STATUS Core modules finished; second presentation held, now in data testing.

NEXT Integrate with the coop's core accounting (Core 3.0).

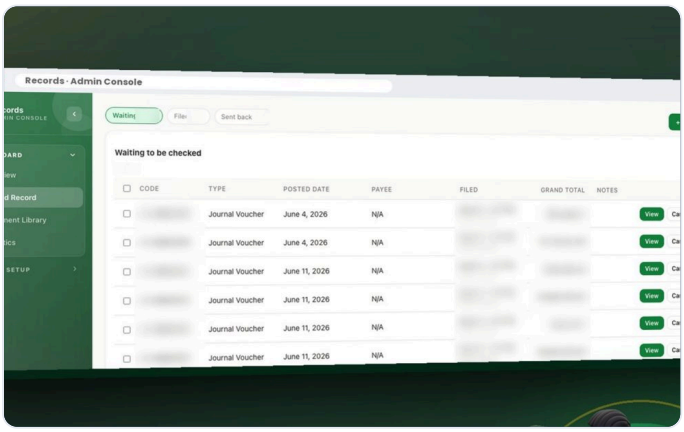

RMS Records System

Record Management System

Records · Admin Console

75%

First presentation held

WHAT IT IS

Keeps the coop's vouchers as digital records. Staff upload scanned vouchers; the system reads each scan by machine and queues it for checking.

WHY IT MATTERS

A checker compares the machine reading with the scan, corrects and files it, so vouchers are found without paper. Mismatched fields are flagged.

1. Staff upload the scanned voucher
2. System reads date, payee, amount and accounts
3. Checker verifies and files it, or sends it back

STATUS In development; first presentation held.

NEXT Continue the build toward go-live.

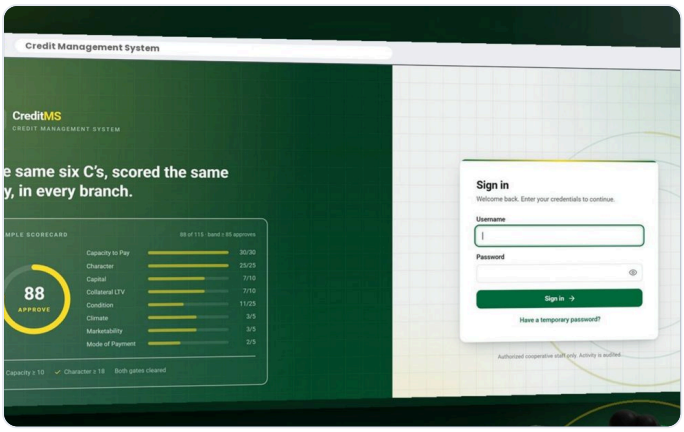

CreditMS Credit System

Credit Management System

Credit Management System

60%

Built, awaiting first presentation

WHAT IT IS

Scores loan applications the same way in every branch against eight factors, from capacity to pay and character to collateral and mode of payment.

WHY IT MATTERS

Consistent, audit-ready credit decisions. The system's recommendation is stored apart from the final decision, so managers see where staff agreed.

1. Officer scores the application
2. It moves through review to the committee
3. Approved, declined or held, then posted

STATUS Finished and ready to show.

NEXT First presentation.

FMS Finance System

Finance Management System

Finance Department

10%

Starting, first module handed over

WHAT IT IS

A management system for the Finance Department, built module by module. The first module is signature specimen storage.

WHY IT MATTERS

Keep signature specimens on file digitally so Finance no longer relies on paper. More modules follow as Finance specifies them.

1. Finance hands over the first module
2. Signature specimens stored digitally
3. Next modules added as specified

STATUS Starting; first module handed over.

NEXT Deliver module 1: signature specimen storage.

LET'S WORK TOGETHER

Thank you.

I'm open to remote part-time work. I bring GoHighLevel and automation skills, full-stack development, and a habit of asking first, testing before launch and catching errors before they reach your clients.
